

Senior product manager with 9+ years building platform products, AI-powered workflows, and customer data infrastructure across B2B SaaS and D2C ecommerce. I see the full picture and build for it — not just the section my team owns, but the system: how users move through it, how the business depends on it, and how the technology has to hold it together. At Leadventure I architected a CDP and AI/ML personalization platform from zero while owning a \$30M product line. At IMPLAN I rebuilt trust, roadmap process, and activation outcomes across a distributed team. Currently operating an independent D2C ecommerce brand solo — product strategy, UX design, front-end development, martech instrumentation, and code-level debugging — the kind of end-to-end ownership that reveals where the hand-offs usually break. I work best in the space between what's known and what's necessary— and build accordingly.

Core Competencies • 0-to-1 Product Strategy • Platform Modernization & AI/ML Integration • Customer Data Infrastructure (CDP) • Roadmap Ownership & Prioritization (WSJF) • Onboarding & Activation • Ecommerce & D2C Product (Shopify) • Cross-Functional Leadership • Stakeholder & Executive Communication • Data-Driven Decision Making

Experience

Founder & Product Manager

LFTR (Looking for the Ridiculous) | Portland, Or | D2C Connection Curator

2025 - Present

- **Built a full D2C brand from zero, end-to-end and solo** — product strategy, brand identity, UX design, Shopify theme development, merchandising systems, martech instrumentation, and launch readiness. No team to validate the way forward; every discipline owned, every tradeoff made, every problem debugged personally.
- **Designed and executed the full UX and information architecture** — built inclusive product classification and filtering systems for collection pages, customized display logic per product style, and made UX decisions that would normally require a dedicated designer and a PM.
- **Handled code-level debugging across Liquid, JavaScript, and theme templates** — diagnosed and resolved indexability issues (H1 errors, soft-404s via Screaming Frog), shipped Liquid-based alt-text automation replacing manual per-page fixes with reusable systems, and maintained theme integrity across iterative changes.
- **Owned the full martech and marketing stack** — instrumented analytics, built and managed email flows, ran paid and organic acquisition, and made channel decisions informed by behavioral data rather than gut instinct.

Product Manager, Strategy

05/2021 - 04/2023

IMPLAN | Charlotte, NC | B2B, B2B2C SaaS Economic Impact Analysis

- **Set product vision and pricing from zero** — designed subscription tier architecture, pricing, and packaging in partnership with the CEO; led discovery sessions with 30 enterprise beta participants to validate willingness-to-pay before building.
- **Owned the roadmap** — co-built a 3-year product and commercial roadmap translating pricing decisions into revenue targets and go-to-market sequencing; introduced WSJF prioritization and rebuilt cross-functional trust in the product team after a history of misaligned launches.
- **Owned onboarding activation end-to-end, from research to rollout** — ran customer interviews and discovery to diagnose drop-off, scoped and led rollout of persona-based walkthroughs and behavioral triggers (Pendo); improved conversion-to-value by 42%, feature activation by 60%, and 30-day engagement by 25% across 10K+ users.
- **Drove expansion revenue and owned delivery risk** — built role-based permissions and real-time collaboration features informed by engagement scoring (increased seats per account by 35%, improved retention by 20%) while owning and grooming the backlog across a distributed engineering team.

Product Manager and Owner, Digital Marketing

11/2019 - 08/2020

Leadventure | Wilsonville, OR | B2B SaaS Website Development and Digital Marketing Services

- **Owned monetization and lifecycle management across a \$30M product line** — 30% of company revenue — spanning SEO/SEM and email products serving 15,000+ dealer websites across power sports, RV, heavy equipment, and marine verticals, each with distinct upgrade paths and change tolerances.
- **Architected the customer data infrastructure from zero** — launched a centralized data governance platform (Tealium CDP), establishing a unified behavioral data layer across 4 product lines that downstream marketing and analytics teams depended on for segmentation and cohort analysis; signed \$500K strategic partnership.
- **Led 0-to-1 build of an AI/ML personalization and reporting platform** — ran build-vs-buy evaluation, defined requirements and vendor criteria, secured a \$500K strategic partnership with Fluency and NinjaCat; cut customer time-to-activation by 33% and lifted NPS by 26 points.
- **Created a new revenue line without disrupting existing service** — resolved product overlap and channel conflict across multiple product teams to open a new OEM customer segment while unifying siloed offerings into an omni-channel platform, delivering \$2M in cost savings.
- **Established product practice from scratch** — first PM for the digital marketing product; created the inaugural roadmap, agile scrum practices, and partnered with finance to identify and quantify the product line's share of business to secure organizational visibility and resources.

Product Strategist

03/2019 - 08/2019

DataClover | Atlanta, GA | B2B Automotive Aftersales SaaS

- **Advised BMW/MINI OEM stakeholders on omni-channel product strategy** — impacting 450+ national service providers, translating between engineering, client stakeholders, and leadership.
- **Ran formal A/B testing for BMW/MINI OEM campaigns** — English vs. direct Spanish translation over a 3-month cycle; results (~20% lift in conversion) informed creative and channel strategy across the dealer service network.
- **Led discovery and requirements gathering with OEM clients** — distilling market research and user interviews into product specifications engineering could deliver.

Sales Supervisor (Bridge Role)

05/2025 - 07/2026

Warby Parker | Portland, Or | Optical Retail

- Bridge role while continuing independent product work on LFTR; supervised a customer-facing retail team of up to 13 and personally averaged \$97K/quarter in individual sales.

Skills & Tools

- **Ecommerce & Consumer Product:** Shopify, front-end development, merchandising systems, catalog/PIM, technical SEO
- **Design & Prototyping:** Figma, Miro, Zeplin, AI-assisted workflows (discovery synthesis, UI/UX, prototyping)
- **Onboarding & Instrumentation:** Pendo, funnel analytics, cohort analysis, behavioral triggers, activation metrics
- **Analytics:** SQL (working proficiency), Looker, Tableau, PowerBI, Google Analytics
- **Data & Platform:** Tealium CDP, HubSpot, ChurnZero, SendGrid
- **PM & Delivery:** JIRA, Confluence, Trello, Agile/Scrum, WSJF prioritization

Education & Certifications

Bachelor of Science | University of Georgia | Family and Consumer Science
Northwestern Kellogg School of Management, Product Strategy

Aug 2011
June 2023
